Catalogue for Pre-startup and Startup Companies

2023

Introduction

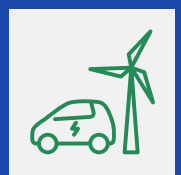

Discover the cutting-edge ventures emerging from the incubator hub of the Bandung Institute of Technology (ITB), DKST ITB. DKST ITB proudly presents a collection of startups that embody the spirit of disruption and innovation. From groundbreaking technology solutions to sustainable initiatives, these ventures showcase the diverse talents nurtured within our incubation ecosystem.

Behind each startup, you will find passionate minds driven by entrepreneurial vision. DKST ITB serves as the catalyst for these pioneers, providing the resources and mentorship needed to transform innovative ideas into impactful businesses. As you explore this catalogue, connect with the stories of these visionaries shaping the future of industries and creating positive change in the world.

This catalogue is more than a showcase; it's an invitation to join the movement of transformative innovation. Experience firsthand how DKST ITB's incubation ecosystem fosters a community of forward-thinkers, mentors, and collaborators. As we celebrate the achievements of these startups, we invite you to be part of the journey toward a future where ideas flourish, boundaries are pushed, and the entrepreneurial spirit thrives.

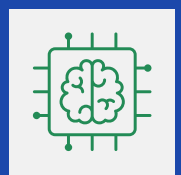

Best wishes,
Entrepreneurship & Business Incubation Team

Winergy

Renewable Energy Solution

WINERGY provides a solution to lower the entry barrier for using renewable energy in various locations with a zero upfront cost scheme. We develop low-head microhydro systems that do not require a significant difference in water elevation, making it suitable for all water flows. Additionally, we offer a subscription electricity scheme through Independent Power Producer (IPP) certification or installment plans for the device. This is expected to be a solution for SMEs, villages, and tourist areas that are unreached or have unstable electricity supply.

Detailed Company Profile

Mountmagg

Production of Dried Black Soldier Fly Maggots as an Alternative Protein

Mountmagg was born from the journey of the three founders to create a business that implements a balance between People, Profit and Planet. The idea for Black Soldier Fly (BSF) emerged due to reports in the media regarding the processing of organic waste in big cities. We discussed this BSF idea, so Mountmagg (Mountain Maggot) was born, which means Mountain Maggot because our home base is in the district Gunung Tujuh, Kab. Kerinci, Jambi.

Planned Technopreneurship

Coaching

The beneficiaries of prototyping grants

Detani

Detani is an Indonesian Technology Startup founded by a team of ITB students focusing on wheat production using indoor farming techniques to address food security. The goal is to sustainably and efficiently cultivate high-quality wheat, utilizing fewer resources such as land and water, and reducing the need for pesticides and herbicides. This approach allows year-round production, decreases reliance on imports, and makes wheat more accessible in urban areas. It has the potential to revolutionize agriculture in Indonesia, enhancing food security, reducing environmental impact, and improving economic sustainability.

The beneficiaries of prototyping grants

IDEMES

IDEMES serves as a tool primarily designed as a reminder for daily sugar consumption limits for individuals with Diabetes mellitus (DM). This multifunctional device can check blood sugar levels, measure granulated sugar, and serve as a daily sugar consumption reminder integrated with an application. Currently, IDEMES operates by automatically dispensing granulated sugar based on blood sugar levels, measured non-invasively using LED (Light Emitting Diode) and Photodiode technology without causing injury. In applying the Beer-Lambert theory, LED functions as a light absorbance value provider that penetrates the skin to assess blood color conditions, while the Photodiode serves as a light absorption component for blood color. Users simply scan their fingertip on the device, and it provides information on blood sugar levels, followed by the automatic release of sugar. The use of this sugar-measuring device is still relatively uncommon, as there are few companies selling such devices. However, with the changing disease trends, especially the shift towards non-communicable diseases like DM, IDEMES presents a promising opportunity in the Indonesian market. The product is currently in the prototype stage, with funding secured for further product development. Intellectual property rights related to trademarks and industry design have been obtained, and the patent is currently under review.

The beneficiaries of prototyping grants

DandosSkin

DandosSkin is a beauty and health startup specializing in the production of lotion products. This lotion is designed to moisturize the skin for 72 hours, particularly addressing dry skin issues resulting from conditions such as diabetes and other ailments. With creative innovation, the primary ingredients include Isomerate Saccharide and Moringa Leaf Extract, which are highly effective in tackling dry skin problems.

The beneficiaries of prototyping grants

Winergy

Winergy introduces a website platform for free simulation of savings and payback period (PBP) to address uncertainties. Companies or governments can determine whether the investment in renewable energy installation with wind turbines is worthwhile or not. Winergy generates revenue from consultations and wind turbine installations in each project with a scheme that involves no capital, down payment, or full upfront payment. We collaborate with wind turbine system providers and installation services.
There are more than 10,000 factory and commercial buildings, at least on Java Island, with a potential market reach of around 160 companies, such as in the KIIC area. Winergy excels in providing personalized simulation services tailored to client conditions, details, and free of charge. Additionally, wind turbine products have a 60% efficiency compared to solar panels, which have a 20% efficiency.

The beneficiaries of prototyping grants

COMVEE

Comvee is a venture in adaptive clothing, tailored to the needs of workers with high mobility. Emphasizing comfort and efficiency, these values are prioritized in every developed garment. Not only in terms of functionality but also in the aesthetics of design, supporting the optimal appearance of workers.
In the production process, Comvee requires essential commodities such as technical fabrics that feel soft on the user's skin, breathable, anti-wrinkle, and others, as well as adaptive accessories like magnetic buttons to velcro or zipper fasteners, allowing easy and adjustable clothing. These commodities are crucial for Comvee in producing high-quality adaptive clothing that meets the needs and preferences of workers with high mobility. Comvee will focus on maximizing various clothing designs that emphasize efficiency and design aesthetics. In the future, Comvee aims to innovate inclusively by creating various types of clothing suitable for the needs of workers and various segments of society, becoming a leading brand of adaptive clothing in Indonesia.
